New in R6V03:

Create custom screens with user-defined fields

To build a custom screen, fields must first be defined that can each be designated as a character, numeric, date, or check-box field. For example, the field CEMSN is configured as a character field that is 25 characters long (Fig. 1). The field can also contain a list of valid values (e.g., years) that can be selected by the user.

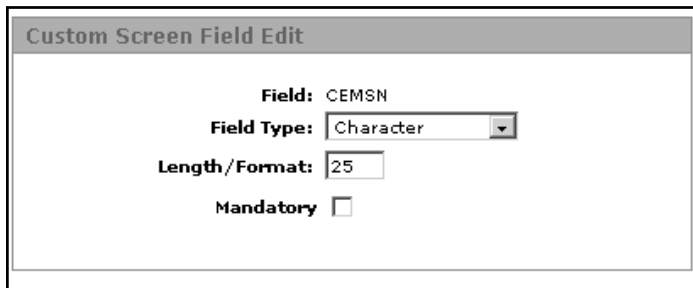

Fig. 1

Once the desired fields have been created, the screen itself can be created. The Create Page screen allows you to determine where within IntelliDealer the screen should appear (Fig. 2).

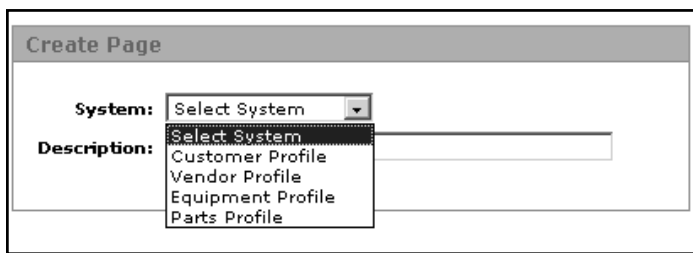

Fig. 2

Next, a template is displayed from which the custom screen can be designed (Fig. 3).

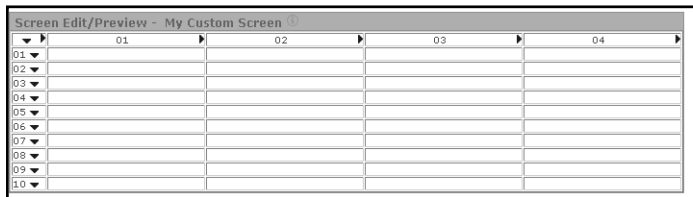

Fig. 3

Simply click on the cell in which a field is to be inserted and the Custom screen field properties window appears. Select which fields should be inserted and the various properties that determine the appearance of the screen (Fig. 4).

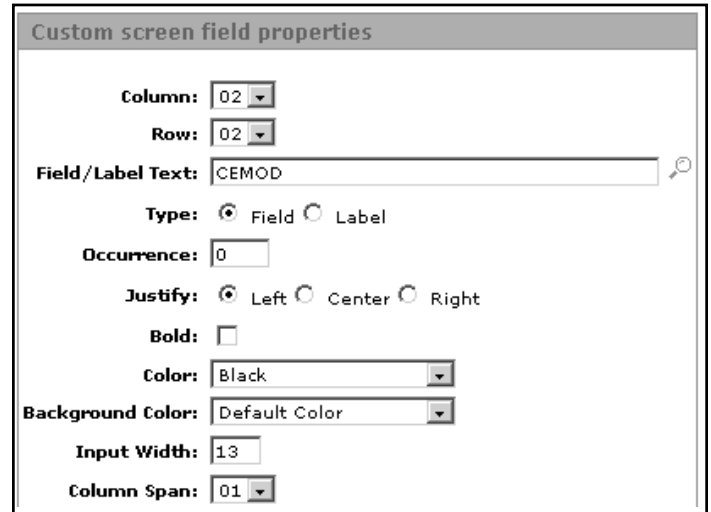

Fig. 4

After the entire screen has been built, Figure 5 demonstrates how the screen will appear on the Extended Info screen of Equipment Profile in IntelliDealer.
