New for R6V07 - Parts Module Enhancements

(R6V07 coming Spring 2009)

Change Parts Information Application

This application allows a user to quickly change values of selected fields for a single part number across multiple branches in the Parts Master file and/or the Price Master file. This is accessed from the Utilities option in Parts and can be secured through User Security. Figure 1 shows an example of how the source and type codes for part A-A27K will be changed to SS and TY respectively in all branch locations in company 01, division 01 in both the Price Master and Part Master files.

Figure 1

Identify Warrantable or Failing Parts on Requisition Screen

The Parts Requisition screen (Figure 2) has been modified to highlight any part number that has been sold to the machine (ie. serial #) assigned to the work order within the last 12 months. This is important information because the part may be covered under warranty or at least help identify common failing parts.

Figure 2

Figure 3

Reference Number	Location	Quantity	Date	Customer Name	Price
W05097	Guelph	1	02/28/2008	Bolton Farms	5.23
W05097	Guelph	1	02/26/2008	Bolton Farms	4.23

If you click on the icon (in this example, a pulsating red triangle), the following window will display showing sales of that part number to that serial number (Figure 3).
